

**What is claimed is:**

1. An antagonist that inhibits an activity or expression of a polypeptide selected from the group consisting of: a polypeptide comprising an amino acid sequence which is at least 90% identical to the amino acid sequence of SEQ ID NO:2 OR 4, and a polypeptide comprising an amino acid sequence as set forth in SEQ ID NO:2 OR 4.  
5
2. A method for the treatment of an individual having need to inhibit FabH polypeptide comprising the steps of: administering to the individual a antibacterially effective amount of an antagonist that inhibits an activity or expression of a polypeptide selected from the group consisting of: a polypeptide comprising an amino acid sequence which is at least 90% identical to the amino acid sequence of SEQ ID NO:2 OR 4, and a polypeptide comprising an amino acid sequence as set forth in SEQ ID NO:2 OR 4.  
10
3. A method for the treatment of an individual infected with a bacteria comprising the steps of: administering to the individual a antibacterially effective amount of an antagonist that inhibits an activity or expression of a polypeptide selected from the group consisting of: a polypeptide comprising an amino acid sequence which is at least 90% identical to the amino acid sequence of SEQ ID NO:2 OR 4, and a polypeptide comprising an amino acid sequence as set forth in SEQ ID NO:2 OR 4.  
15
4. The method of claim 3 wherein said bacteria is selected from the group consisting of: a member of the genus *Staphylococcus*, *Staphylococcus aureus*, a member of the genus *Streptococcus*, and *Streptococcus pneumoniae*.  
20
5. A method for the treatment of an individual having need to inhibit FabH polypeptide comprising the steps of: administering to the individual a antibacterially effective amount of an antagonist that inhibits a conversion of acetyl-CoA to product or a conversion of malonyl-ACP to product.  
25
6. A method for the treatment of an individual infected with a bacteria having comprising the steps of: administering to the individual a antibacterially effective amount of an antagonist that inhibits a conversion of acetyl-CoA by FabH to product or a conversion of malonyl-ACP by FabH to product.  
30

7. The method of claim 6 wherein said bacteria is selected from the group consisting of: a member of the genus *Staphylococcus*, *Staphylococcus aureus*, a member of the genus *Streptococcus*, and *Streptococcus pneumoniae*.

5

8. A method for the treatment of an individual infected by a bacteria comprising the steps of: administering to the individual a antibacterially effective amount of an antagonist that inhibits a conversion of acetyl-CoA to product by *Staphylococcus aureus* FabH or a conversion of malonyl-ACP to product by *Staphylococcus aureus* FabH.

10

9. The method of claim 6 wherein said bacteria is selected from the group consisting of: a member of the genus *Staphylococcus*, *Staphylococcus aureus*, a member of the genus *Streptococcus*, and *Streptococcus pneumoniae*.

15

10. A method for the treatment of an individual infected by *Streptococcus pneumoniae* comprising the steps of: administering to the individual a antibacterially effective amount of an antagonist that inhibits a conversion of acetyl-CoA to product by *Streptococcus pneumoniae* FabH or a conversion of malonyl-ACP to product by *Streptococcus pneumoniae* FabH.

20

11. The method of claim 10 wherein said bacteria is selected from the group consisting of: a member of the genus *Staphylococcus*, *Staphylococcus aureus*, a member of the genus *Streptococcus*, and *Streptococcus pneumoniae*.

25

12. An antagonist that inhibits an activity of a polypeptide selected from the group consisting of: a polypeptide comprising an amino acid sequence which is at least 90% identical to the amino acid sequence of SEQ ID NO:2 OR 4, and a polypeptide comprising an amino acid sequence as set forth in SEQ ID NO:2 OR 4, wherein said activity is a conversion of acetyl-CoA to product or a conversion of malonyl-ACP to product.

30

13. A method for the treatment of an individual having need to inhibit FabH polypeptide comprising the steps of: administering to the individual a antibacterially effective amount of an antagonist that inhibits an activity of a polypeptide selected from the

group consisting of: a polypeptide comprising an amino acid sequence which is at least 90% identical to the amino acid sequence of SEQ ID NO:2 OR 4, and a polypeptide comprising an amino acid sequence as set forth in SEQ ID NO:2 OR 4, wherein said activity is a conversion of acetyl-CoA to product or a conversion of malonyl-ACP to product.

5

14. A method for the treatment of an individual infected with a bacteria comprising the steps of: administering to the individual a antibacterially effective amount of an antagonist that inhibits an activity of a polypeptide selected from the group consisting of: a polypeptide comprising an amino acid sequence which is at least 90% identical to the amino acid sequence of SEQ ID NO:2 OR 4, and a polypeptide comprising an amino acid sequence as set forth in SEQ ID NO:2 OR 4 wherein said activity is a conversion of acetyl-CoA to product or a conversion of malonyl-ACP to product.

10

15. The method of claim 14 wherein said bacteria is selected from the group consisting of: a member of the genus *Staphylococcus*, *Staphylococcus aureus*, a member of the genus *Streptococcus*, and *Streptococcus pneumoniae*:

20

16. A method for inhibiting a FabH polypeptide comprising the steps of: contacting a composition comprising said polypeptide with an amount effective amount of an antagonist that inhibits a conversion of acetyl-CoA to product or a conversion of malonyl-ACP to product.

25

17. A method for inhibiting a conversion of acetyl-CoA to product or a conversion of malonyl-ACP to product comprising the steps of: contacting a composition comprising bacteria with a compound that inhibits a conversion of acetyl-CoA to product or a conversion of malonyl-ACP to product for an effective time to cause killing or slowing or growth of said bacteria.

30

18. The method of claim 17 wherein said bacteria is selected from the group consisting of: a member of the genus *Staphylococcus*, *Staphylococcus aureus*, a member of the genus *Streptococcus*, and *Streptococcus pneumoniae*.

19. A method for inhibiting a growth of bacteria comprising the steps of: contacting a composition comprising bacteria with an antibacterially effective amount of an antagonist that inhibits a conversion of acetyl-CoA to product by *Streptococcus pneumoniae* or *Staphylococcus aureus* FabH or a conversion of malonyl-ACP to product by 5 *Streptococcus pneumoniae* or *Staphylococcus aureus* FabH.

20. The method of claim 19 wherein said bacteria is selected from the group consisting of: a member of the genus *Staphylococcus*, *Staphylococcus aureus*, a member of the genus *Streptococcus*, and *Streptococcus pneumoniae*.  
10

21. A method for inhibiting a FabH polypeptide comprising the steps of: contacting a composition comprising bacteria with an antibacterially effective amount of an antagonist that inhibits a conversion of acetyl-CoA to product by *Streptococcus pneumoniae* or *Staphylococcus aureus* FabH or a conversion of malonyl-ACP to product by 15 *Streptococcus pneumoniae* or *Staphylococcus aureus* FabH.

22. The method of claim 21 wherein said bacteria is selected from the group consisting of: a member of the genus *Staphylococcus*, *Staphylococcus aureus*, a member of the genus *Streptococcus*, and *Streptococcus pneumoniae*.  
20
